

Dear Sir/Madam,

I am writing to express my strong interest in contributing to the Slippers2Sat-2 (S2S-2) mission. As an Electronics Engineering student with hands-on experience in PCB design, embedded firmware development and system hardware integration, I am highly motivated to be part of a project that combines space technology with meaningful societal impact.

My experience includes designing and developing embedded systems using various Microcontroller along with strong proficiency in PCB design tools such as KiCad and Proteus. During my internship at SEDS Nepal, I worked on electronics modules for pseudo-satellite systems, focusing on modular design (replica-of the pocket-cube-sat for the students to understand the satellite sub-system). At YarsaTech, I strengthened my hardware design and firmware development skills by building power electronics systems, QC devices, Buck/Boost modules and BLE-enabled embedded products.

Beyond technical skills, I bring leadership and mentorship experience as the Electronics & Software Lead of the Robotics Club at Pashchimanchal Campus, where I have mentored over 350+ students and helped establish an in-house PCB prototyping lab. These experiences have strengthened my ability to work collaboratively, manage project and contribute effectively within a team environment.

I am eager to learn and contribute to S2S-2. I believe my background in embedded systems, communication modules and hardware design, combined with my passion for space technology, makes me a strong candidate for this program.

Thank you for your consideration.

Sincerely,
Prashant Bhandari
